PROJECT REPORT ON

"Gym Management System "

SUBMITTED TO

SAVITRIBAI PHULE PUNE UNIVERSITY
IN PARTIAL FULFILLMENT OF THE REQUIREMENT OF
MASTER OF BUSINESS ADMINISTRATION

SUMBITTED BY

Name Of Student

Dongare Pravin Ramdas
Gadge Shlok Namdev
Dhumal Naresh subhash

UNDER THE GUIDANCE OF

PROF. Lamkhade.S.C

SAMARTH COLLEGE OF
COMPUTER SCIENCE, BELHE

Declaration

I the undersigned, hereby declare that the Project Report entitled **"Gym Management System ".** Written and submitted by me to the Savitribai Phule Pune University. This is my original work and the conclusions drawn therein are based on the material collected by me.

Place:Belhe

Date: / / 2026

NAME OF THE STUDENT

Dongare Pravin Ramdas
Gadge Shlok Namdev
Dhumal Naresh Subhash

Acknowledgment

I am extremely grateful to Samarth College Of Computer Science, Belhe an opportunity to do the field project in your esteemed organization I would like to express my deep gratitude and sincere thanks to our faculty **Prof.Lamkhade.S.C** for his encouragement and guidance throughout the period of this study.

My special thanks **Prof. Wagh A.S** Head of Department for his supportive role and advice and valuable suggestions which helped me. Finally, I thank Principal and all other faculty members of the institute for their constant support without which study would not have been successful.

Finally, I thank Director **Dr. Uttam Shelar Sir** and all other faculty.

Place:Belhe

Date: / / 2026

Certificate

This is to certify that the Field Project Report entitled ***"Gym Management System "*** is a bonfide work carried out by **1) Dongare Pravin Ramdas 2)Gadge Shlok Namdev 3)DhumNaresh subhash** a student of Samarth College of Computer Science, Belhe which is being submitted to the Savitribai Phule Pune University, Pune in partial fulfillment of requirements for the award of degree of BACHELOR OF COMPUTER SCIENCE under my supervision and guidance.

To the best of my knowledge and belief the work embodied in this project report has not been submitted earlier for the award of any degree or similar title of this to any other University or examining body.

1.1 INTRODUCTION

Our gym management software is a gym and health club membership management system.

You can keep records on your members, their membership, and have quick and easy communication between you and your members.

Our gym management software is a complete gym and recreation facility system program which looks after all of your members, membership and activities. It is designed for gyms, recreation centers, and health clubs.

Our gym management software provides lots of functions such data entry of customer, keeping records of all the things about customers fees, plan and physical fitness which help to provide good quality of services to customer from Gym managers.

In this system also provide the total information about machinery and data of coaches is also stored in it.

Services provided by Gym are also handled by this system.

1.2 BACKGROUND

The gym management system evolved from manual paper-based systems to automated software solutions.Initially,it focused on basic membership management,but over time,it expanded to include features such as scheduling, inventory management,and reporting.As technology advanced,the system integrated with payment gateways and social media platforms.

The growing demand for fitness services has driven the need for efficient gym management systems.Todays, advancements in cloud computing,mobile apps,and artificial intelligence continue to enhance the capabilities of modern gym management systems.

2 Problem Definition: -

2.1 OBJECTIVES OF PROJECT

- The main objective of the project is to develop software that facilitates the data storage, data maintenance and its retrievalfor the gym in an igneous way.

- To store the record of the customers, the staff that has the privileges to access, modify and delete any record and finally the service, gym provides to its customers.

- Also, only the staff has the privilege to access any database and make the required changes, if necessary.

- To develop easy-to-use software which handles the customer-staff relationship in an effective manner.

- To develop a user friendly system that requires minimal user training. Most of features and function are similar to those on any windows platform.

2.2 Existing Manual System:

In the existing system the exams are done only manually but in proposed system we have to computerize the exams using this application.

- Lack of security of data.
- More man power.
- Time consuming.
- Consumes large volume of pare work.
- Needs manual calculations.
- No direct role for the higher officials

2.3 Proposed System:

The aim of proposed system is to develop a system of improved facilities. The proposed system can overcome all the limitations of the existing system. The system provides proper security and reduces the manual work.

- Security of data.
- Ensure data accuracy's.
- Proper control of the higher officials.
- Minimize manual data entry.
- Minimum time needed for the various processing.
- Greater efficiency.
- Better service.
- User friendliness and interactive.
- Minimum time required.

3.SYSTEM ANALYSIS

FUNCTIONAL REQUIREMENT

1. **Member Management:**
   • Register new members
   • Update member information
   • Delete member accounts
   • View member profiles
2. **Class Scheduling:**
   • Create and manage class schedules
   • Assign instructors to classes
   • View class schedules and attendance
3. **Equipment Management:**
   • Add and manage equipment inventory
   • Assign equipment to classes or members
   • Track equipment usage and maintenance
4. **Payment Processing:**
   • Process membership payments
   • Handle payment plans and subscriptions
   • Generate invoices and receipts
5. **Reporting:**
   • Generate reports on member attendance, class participation.

FEASIBILITY STUDY

Technical Feasibility:

The system must be evaluated from the technical point of view first. The assessment of this feasibility must be based on an outline design of the system requirement in the terms of input, output, programs and procedures. Having identified an outline system, the investigation must go on to suggest the type of equipment, required method developing the system, of running the system once it has been designed.

Technical Gyms raised during the investigation are:

- Does the existing technology sufficient for the suggested one?
- Can the system expand if developed?

The project should be developed such that the necessary functions and performance are achieved within the constraints. The project is developed within latest technology.

Through the technology may become obsolete after some period of time, due to the fact that never version of same software supports older versions, the system may still be used. So there are minimal constraints involved with this project.

Economic Feasibility:

The developing system must be justified by cost and benefit. Criteria to ensure that effort is concentrated on project, which will give best, return at the earliest. One of the factors, which affect the development of a new system, is the cost it would require.

The following are some of the important financial questions asked during preliminary investigation:

- The costs conduct a full system investigation.
- The cost of the hardware and software.
- The benefits in the form of reduced costs or fewer costly errors.

Since the system is developed as part of project work, there is no manual cost to spend for the proposed system. Also all the resources are already available, it give an indication of the system is economically possible for development.

Social Feasibility:

Social feasibility is one of the feasibility study where the acceptance of the people is considered regarding the product to be launched.It describes the effect on users from the introduction of the new system considering whether there will be a need for retraining the workforce. It describes how you 16 propose to ensure user co-operation before changes are introduced. The effect that a proposed project may have on the social system in the project environment is addressed in the social feasibility. It may happen that a particular category of employees may be short or not available as a result of ambient social structure. The influence on the social status of the participants by the project should be evaluated in order to guarantee compatibility. It must be identified that employees in particular industries may have specific status symbols within the society.

SYSTEM ANALYSIS

Software Requirements:

- Windows 11(64-bit) or above.

- Visual code
- Xampp

Hardware Requirements:

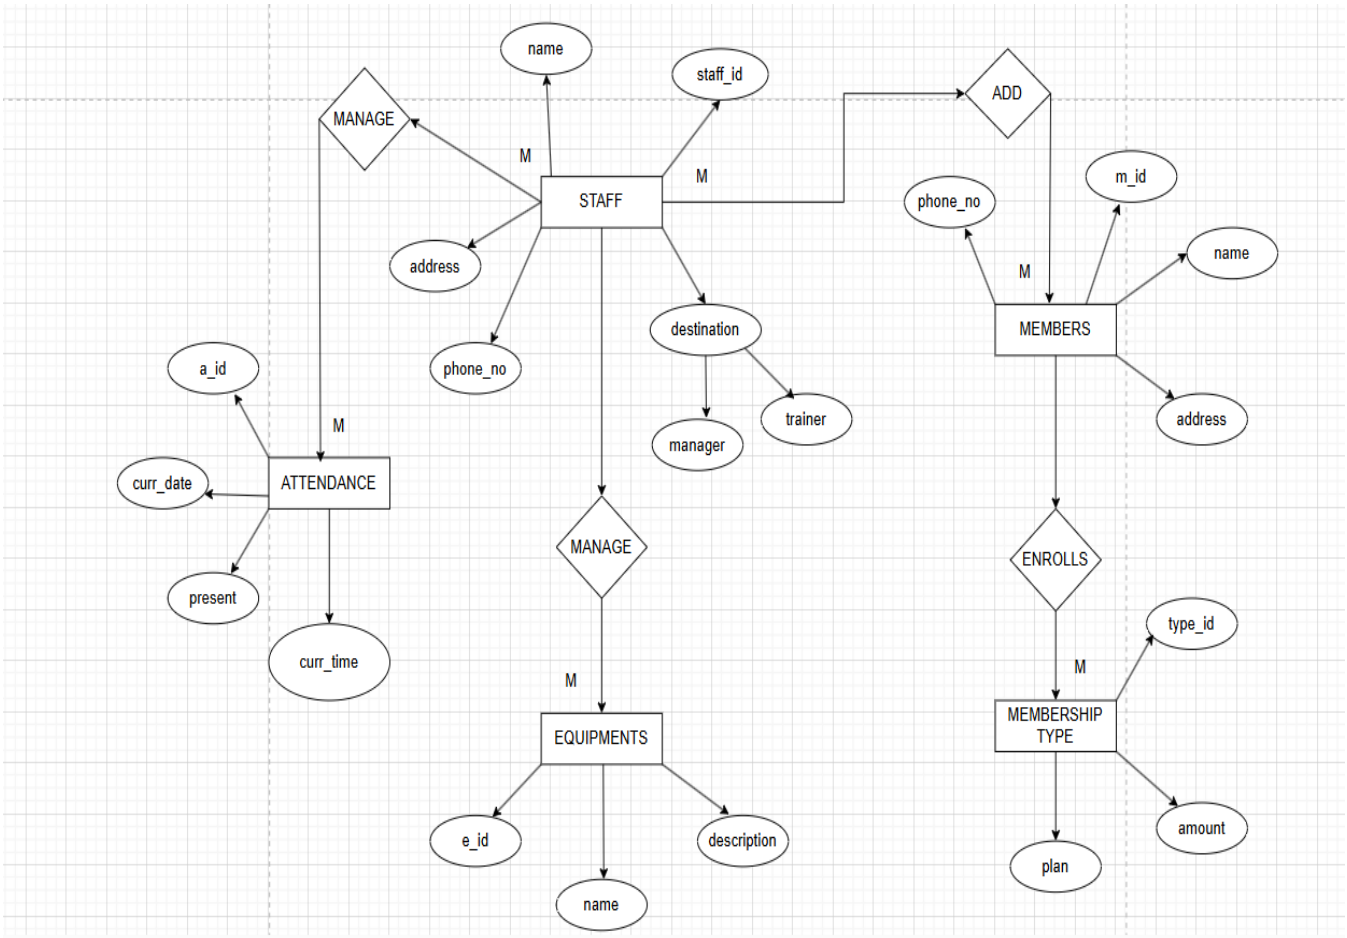

- Processor: Intel core i5
- RAM: 512MB or more.

Technologies Used:

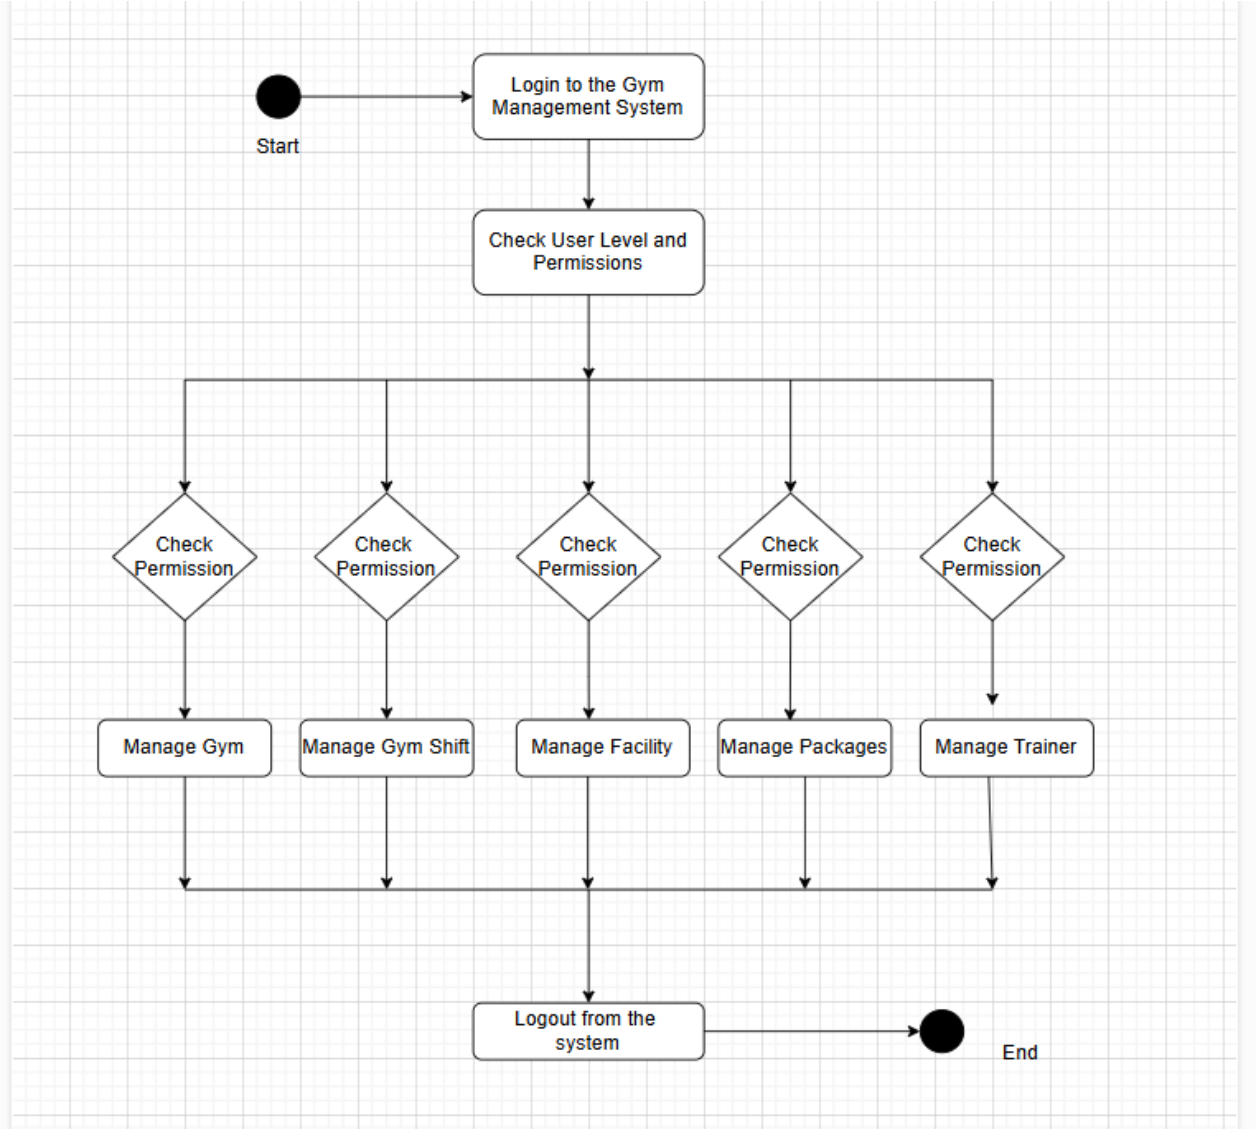

- HTML5
- CSS3
- JavaScript
- PHP
- MySQL

6.Future Enhancement:

The health and fitness industry has become extremely diverse in the range of services and facilities it offers; varying from large scale leisure centres and gymnasiums, to individual personal trainers who travel from one client to the next in their cars., Some services specialize in offering structured classes, others are informal; some cater for a particular demographic, and others for anyone.

Classes for Mature Older People:

This group of people can make up a great proportion of your clientèle. They generally do not like loud music, so keep it soft or at a medium level. Most also prefer low-key surroundings so avoid bright lights, mirrors, or posters of super-fit young people for example. Older participants are often more concerned about joint movement and flexibility than weight loss and can relate better to an older instructor who shows respect and individual attention to their requirements. It is very common that this type of population attends for social reasons - to meet others and relax.

For Professional Athletes or Competitive Sports People:

This can be a hard group to cater for because they can vary considerably in the type of sports they are involved in, and elite athletes may require very specialised fitness components. The triathlete, swimmer, runner or aerobics-orientated person will want a hard, advanced class to challenge their fitness. The type of sport and the fitness components to be improved will indicate the type of training employed. You may find elite athletes require personal training, one-on-one, to best achieve their goals.

For Beginners:

These type of clients can generally be catered for a little easier than other groups. Generally, their cardiovascular fitness needs to be increased, and their basic fitness components of strength, flexibility and muscular endurance can be improved as well. Attending classes with easy-to-follow fitness routines will allow beginners to keep up and enhance their skills almost immediately. A basic low-impact class with a caring and understanding instructor will be a good start to any beginners fitness regime.

For Children :

Younger persons are becoming more involved in fitness classes. Fitness classes for children are extremely important for the following reasons.

- There may be low levels of physical education training and sports education in schools.

- Increased concern for overweight and obese children and adolescents.
- Poor diet and exercise regimes.

One of the problems is the lack of health and fitness centres offering programmes for these customers. Weight-training for children and younger teenagers is not recommended, therefore fitness/aerobics programmes can be a great way of ensuring that this group gets suitable exercise.

Owners/managers of gyms should expand their timetable to include specific classes for younger children and teenagers. Instructors should increase their knowledge of children's fitness. Teachers need to promote extra curricular activities and parents should encourage their children to participate in more physical activity, especially if the children are not actively involved in sport or other physical activities.

A suitable programme for children would be as follows:

1) 3-5 Year Olds: 30 Minutes
   - A simple, easy-to-follow warm-up using a game or simple aerobic moves.
   - No more than 3 moves should be used.

7.Advantages and Disadvantages:

Advantages:

1. Access to equipment that isn't practical at home-
   - most of us have limited space at home for workout equipment, so we have to pick and choose which ones we use often enough to justify owning.
   - On the flip side, you'll never have to wait you turn at home like you may in crowded gym.

2. May help you stick to a routine-
   - Like it or not, to some extent we are all creatures of habit.
   - Establishing a routine of stopping at the gym on the way home from work, or after you have dropped the kids off at school, for instance, might help you make regular workout a reality.

3. Easy to meet up with a workout buddy-
   - Workout with a friend at the gym for more accountability and probably more fun! Then again, you can still meet up for a buddy to walk or run in your neighbourhood.

4. Access to fitness classes and personal trainers-
   - Depending on the gym and your type of membership, training session and fitness classes may be included.

5. Monetary motivation-
   - You're paying for it, so you'd better use it! For some, this is great motivation.

Disadvantages:

1.You have to leave the house-

- for some people, knowing they'll have to get in the car and drive to the gym is a big un-motivator.
- Most gyms charge extra for childcare, so that may be a consideration and if you have to work around kids' naptimes, that can make it even more difficult.

2.Awkwardness-

- we all know that the gym is a place people go to do some self improvement, and they all had to start as beginner's. But sometime s knowing this in our head doesn't help how we feel, and that can make the gym an intimidating place for body insecurities or feeling awkward trying to figure out how to work the equipment.

3.Money-

- Depending on your budget, gym membership fees can be a hardship. Working out at home cost nothing. Even if you invest in at home workout equipment, this can be done a little at a time as money is available.

4.Too much peopling-

- If you're an introvert, or just someone who needs a little time to yourself after a day at work or with the kids, it can be draining being around so many people.

8.Testing Procedure

The process of evaluating software during the development process or at the end of the development process to determine whether it satisfies specified business requirements. Validation Testing ensures that the product actually meets the client's needs. It can also be defined as to demonstrate that the product fulfil its intended use when deployed on appropriate environment.

- Unit Testing
- Integration Testing
- System Testing
- User Acceptance Testing

Security Testing of the Project

Testing is vital for the success of any software. no system design is ever perfect. Testing is also carried in two phases. first phase is during the software engineering that is during the module creation. second phase is after the completion of software. this is system testing which verifies that the whole set of programs hanged together.

White Box Testing:

In this technique, the close examination of the logical parts through the software are tested by cases that exercise species sets of conditions or loops. all logical parts of the software checked once. errors that can be corrected using this technique are typographical errors, logical expressions which should be executed once may be getting executed more than once and error resulting by using wrong controls and loops. When the box testing tests all the independent part within a module a logical decisions on their true and the false side are exercised , all loops and bounds within their operational bounds were exercised and internal data structure to ensure their validity were exercised once.

Black Box Testing:

This method enables the software engineer to device sets of input techniques that fully exercise all functional requirements for a program. black box testing tests the input, the output and the external data. it checks whether the input data is correct and whether we are getting the desired output.

Alpha Testing:

Acceptance testing is also sometimes called alpha testing. Be spoke systems are developed for a single customer. The alpha testing proceeds until the system developer and the customer agree that the provided system is an acceptable implementation of the system requirements.

Beta Testing:

On the other hand, when a system isto be marked as a software product, another process called beta testing is often conducted. During beta testing, a system is delivered among a number of potential users who agree to use it. The customers then report problems to the developers. This provides the product for real use and detects errors which may not have been anticipated by the system developers.

Unit Testing:

Each module is considered independently. it focuses on each unit of software as implemented in the source code. it is white box testing.

Integration Testing:

Integration testing aims at constructing the program structure while at the same constructing tests to uncover errors associated with interfacing the modules. modules are integrated by using the top down approach.

Validation Testing:

Validation testing was performed to ensure that all the functional and performance requirements are met.

System Testing:

It is executing programs to check logical changes made in it with intention of finding errors. a system is tested for online response, volume of transaction, recovery from failure etc. System testing is done to ensure that the system satisfies all the user requirements.

9.Conclusion:

GYM MANAGEMENT SYSTEM PROJECT

Gym management system project objective of this project was to build a program for maintaining gym management system project details of all gym management system project members, employees and inventor.

Gym management system project system developed is able to meet all gym management system project basic requirements. Gym management system project management of gym management system project records (both members and employees) will be also benefited by gym management system project proposed system, as it will automate gym management system project whole procedure, which will reduce gym management system project workload.

Gym management system project security of gym management system project system is also one of gym management system project prime concerns. Gym management system project is always a room for improvement in any software, however efficient gym management system project system may be. Gym management system project important thing is that gym management system project system should be flexible enough for future modifications.

Gym management system project system has been factored into different modules to make system adapt to gym management system project fur gym management system project changes. Every effort has been made to cove r all user requirements and make it user friendly.

✓ Goal achieved: Gym management system project System is able provide gym management system project interface to gym management system project owner so that he can replicate his desired data .

✓User friendliness: Though gym management system project most part of gym management system project system is supposed to act in gym management system project background, efforts have been made to make gym management system project foreground interaction with user(owner) as smooth as possible. Also gym management system project integration of gym management system project existing system with gym management system project project has been kept in mind throughout gym management system project development phase.
